

Inheritance

Program to find total salary by hand of an employee

Class1

Get basic pay, deduction and bonus from console

Class2

Calculate hra(5% of basic pay) and pf(20% of basic pay)

Class3

Find the total salary(Basicpay+hra-pf-deduction+bonus)

Class4

Salary slip should contain basic pay, deduction, hra, pf, bonus and total salary by hand

//Class1

```
import java.util.Scanner;
```

```
public class Employee_BpDedBon {
```

```
    double bp,ded,bonus;
```

```
    public void employee_bpdedbon() {
```

```
        Scanner sc = new Scanner(System.in);
```

```
        System.out.println("Enter Basic Pay, Deduction and Bonus in  
order");
```

```
        bp = sc.nextDouble();
```

```
        ded = sc.nextDouble();
```

```
        bonus = sc.nextDouble();
    }
}
```

//Class2

```
public class Employee_HraPf extends Employee_BpDedBon{
    double hra,pf;
    public void employee_hrapf() {
        hra = bp * 0.05;
        pf = bp * 0.20;
    }
}
```

//Class3

```
public class Employee_TotalSalary extends Employee_HraPf{
    double totalsalary;
    public void employee_totalsalary() {
        totalsalary = bp+hra+bonus-pf-ded;
    }
}
```

//Class4

```
public class Employee_SalarySlip extends Employee_TotalSalary{
    public void dispaly() {
        System.out.println("--- Salary Slip ---");
        System.out.println("Basic Pay: " + bp);
    }
}
```

```
System.out.println("Deduction: " + ded);
System.out.println("Bonus: " + bonus);
System.out.println("HRA: " + hra);
System.out.println("PF: " + pf);
System.out.println("Total Salary (In Hand): " + totalsalary);
}

public static void main(String[] args) {
    Employee_SalarySlip obj = new Employee_SalarySlip();
    Employee_SalarySlip obj = new Employee_SalarySlip();
    obj.employee_bpdedbon();
    obj.employee_hrapf();
    obj.employee_totalsalary();
    obj.dispaly();
}
}
```
